

What is claimed is:

1. An audio apparatus comprising:
 - a tuner unit for receiving broadcast;
 - a digital reproducing unit;
 - 5 operating means for operating the tuner unit and the digital reproducing unit;
 - a control unit for controlling the tuner unit and the digital reproducing unit in response to an operation of the operating means, wherein
 - 10 in a first mode, when an audio signal outputted from the tuner unit is selectively received, the control unit controls to turn on the power of the digital reproducing unit; and
 - in a second mode, when an audio signal outputted from
 - 15 the tuner unit is selectively received, the control unit controls to turn off the power of the digital reproducing unit, and further to turn on the power thereof when selecting the audio signal outputted from the digital reproducing unit.
- 20 2. The audio apparatus as cited in claim 1, wherein:
 - said first mode and said second mode are switched by said control unit when a predetermined key operation is performed to said operating means.
- 25 3. The audio apparatus as cited in claim 1 or claim 2, wherein:
 - said reproducing unit is a CD player radio frequency noise components of which are likely to interfere the reception of AM broadcasting by said tuner.
- 30 4. The audio apparatus as cited in claim 2 or claim 3,

wherein:

operation for changing said control unit from said first mode to said second mode and operation for changing said control unit from said second mode to said first mode are the same.

5 5. The audio apparatus as cited in claim 2 or claim 4, further comprising:

10 a display for displaying the result of the switching operation when said first mode and said second mode are switched by said control unit.
